

Fastlane Access Reader Mounting Options

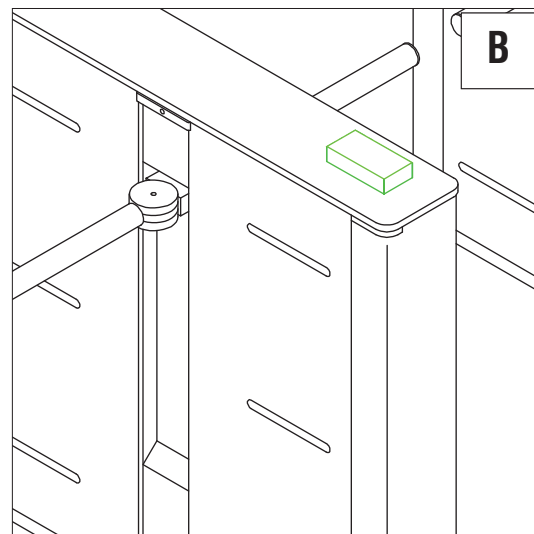

There are various ways of mounting card readers to the Fastlane range range of Barrier Arm Optical Turnstiles. These are detailed below (Fastlane *plus* is given as the example).

Option A

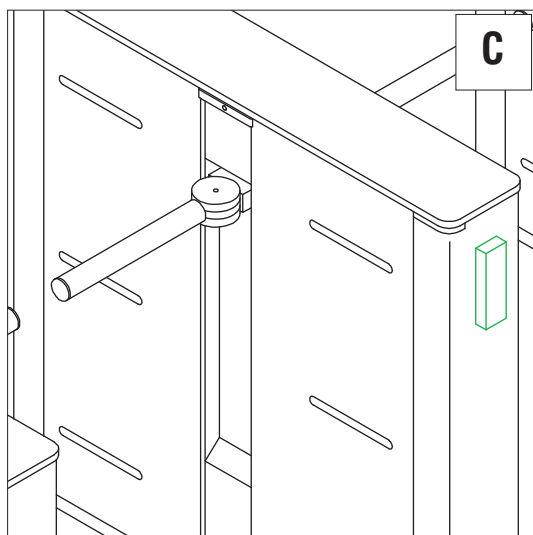

Mounted below vanity top. Available area:
250 x 115 x 70 mm
(10" x 4.5" x 2.75" approx)

This option is dependant on the material chosen for the vanity top as certain materials interfere with the card reader's performance and read range.

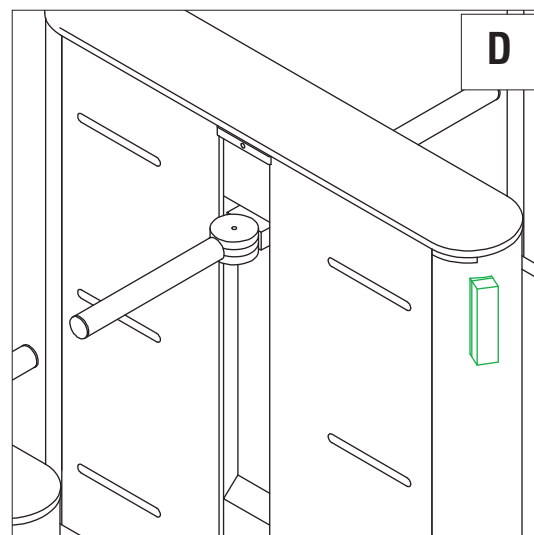

Option B

Mounted directly onto vanity top.

Option C

Mounted externally directly onto square end.

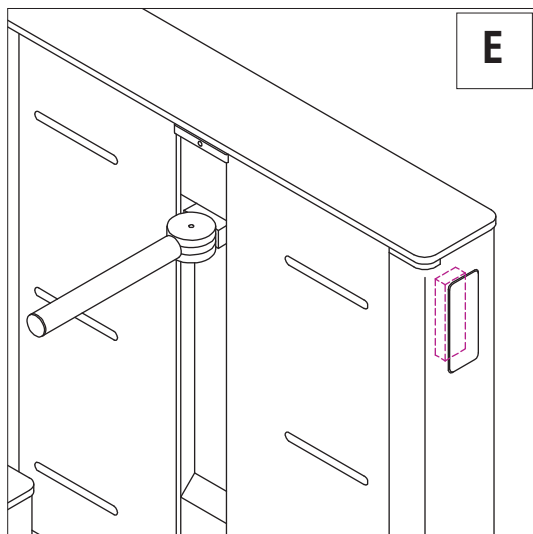

Option D

Mounted externally on nylon block for round end. (Please note there is an extra cost for the mounting block.)

Fastlane Access Reader Mounting Options

Option E

Mounted behind frosted Acrylic window.

Option F

Mounted below vanity top, behind frosted Acrylic window. Available area:
250 x 115 x 70 mm
(10" x 4.5" x 2.75" approx)

IMPORTANT

The read range of proximity card readers can be effected by different materials, this is especially relevant to metals such as steel and stainless steel. Consideration to the read range of any card reader and how it will be effected by the neighbouring materials should be given when choosing its position.

Please contact your local sales representative for any cost implications involved with these options.
